## 3.2.2

**„B” táblázat: Az ADR anyagainak és tárgyainak betűrendes felsorolása**

Ez a tárgymutató a 3.2.1 szakasz „A” táblázatban UN szám szerinti sorrendben felsorolt anyagokat és tárgyakat tartalmazza betűrendes felsorolásban. A táblázat nem szerves része az ADR-nek. A táblázatot nem terjesztették be sem a Belső Szállítási Bizottság Veszélyes Áru Szállítási Munkacsoportjához ellenőrzés és jóváhagyás céljából, sem az ADR Szerződő Felekhez hivatalos jóváhagyás céljából. A táblázatot az „A” és „B” Mellékletben való eligazodás megkönnyítésére az ENSZ Európai Gazdasági Bizottsága Titkársága állította össze kellő gondossággal, azonban a táblázat használata nem helyettesíti a Mellékletek áttanulmányozását és az azokban foglalt előírások betartását, mivel ellentmondás esetén a Mellékletekben foglaltak a mérvadók. Joghatallyal csak az ADR és Mellékletei rendelkeznek.

- Megjegyzés:**
- 1. A betűrendes sorrend céljából a következő információ nincs figyelembe véve, még ha az a helyes szállítás név részét képezi is: számok, görög betűk, rövidítések, mint „szek”, „terc”, és betűk, mint „N” (nitrogén), „n” (normál), „o” (orto), „m” (meta), „p” (para) és „m.n.n.” (másként meg nem nevezett).*
  - 2. Az anyagok és tárgyak nagybetűvel írt neve a helyes szállítási megnevezést (lásd a 3.1.2 szakaszt) jelenti, a kereshetőség érdekében azonban esetenként a szavak sorrendje fel van cserélve. A helyes szállítási megnevezésre minden esetben a a 3.2 fejezet „A” táblázat megnevezései a mértékadóak.*
  - 3. A anyagok és tárgyak nagybetűvel írt nevét követő „lásd” szó alternatív helyes szállítási megnevezést vagy egy helyes szállítási megnevezés részét jelöli (kivéve a PCB-knél) (lásd a 3.1.2.1 bekezdést).*
  - 4. Ha egy kisbetűvel írt nevet a „lásd” szó követ, az azt jelenti, hogy a név nem egy helyes szállítási megnevezés, csupán szinonima.*
  - 5. Ahol a tétel részben nagybetűvel, részben kisbetűvel van írva, a kisbetűs szöveg nem része a helyes szállítási megnevezésnek (lásd a 3.1.2.1 bekezdést).*
  - 6. Az okmányokban és a küldeménydarabok jelölésénél a helyes szállítási megnevezés az esettől függően egyes számban vagy többes számban használható (lásd a 3.1.2.3 bekezdést).*
  - 7. A helyes szállítási megnevezés pontos meghatározására lásd a 3.1.2 szakaszt.*

**3.3 FEJEZET****EGYES ANYAGOKRA VAGY TÁRGYAKRA VONATKOZÓ  
KÜLÖNLEGES ELŐÍRÁSOK****3.3.1**

Amennyiben a 3.2 fejezet „A” táblázatának 6 oszlopában egy anyagra vagy tárgyra különleges előírás vonatkozik, ezen különleges előírás jelentése és követelményei a következők:

- 16** Az új vagy régebben létező robbanóanyagok vagy robbanótárgyak mintái – az illetékes hatóságok által előírt módon (lásd a 2.2.1.1.3 pontot) – vizsgálati, besorolási, kutatási és fejlesztési vagy minőségellenőrzési célból, vagy mint kereskedelmi minták szállíthatók. A nem nedvesített vagy nem deszenzibilizált robbanóanyag minták mennyisége az illetékes hatóságok előírásai szerinti kis küldeménydarabokban 10 kg-ra van korlátozva. A nedvesített vagy deszenzibilizált robbanóanyag minták mennyisége 25 kg-ra van korlátozva.
- 23** Bár ez az anyag a gyúlékonyság veszélyével bír, ez csak zárt térben bekövetkező rendkívüli tűz esetén jelent tényleges veszélyt.
- 32** Ez az anyag semmilyen más formában nem tartozik az ADR előírásainak hatálya alá.
- 37** Ez az anyag bevont formában nem tartozik az ADR előírásainak hatálya alá.
- 38** Ez az anyag 0,1 tömeg%-nál nem több kalcium-karbid tartalommal nem tartozik az ADR előírásainak hatálya alá.
- 39** Ez az anyag 30 tömeg% alatti vagy legalább 90 tömeg% szilícium tartalommal nem tartozik az ADR előírásainak hatálya alá.
- 43** Ha peszticidként adják fel, akkor ezeket az anyagokat a megfelelő peszticid tétel alatt és a peszticidekre vonatkozó előírások (lásd a 2.2.61.1.10 – 2.2.61.1.11.2 pontot) szerint kell szállítani.
- 45** Azok az antimon-oxidok és antimon-szulfidok, amelyek arzéntartalma összes tömegükhöz viszonyítva a 0,5%-ot nem haladja meg, nem tartoznak az ADR előírásainak hatálya alá.
- 47** A ferri-cianidok és ferro-cianidok nem tartoznak az ADR előírásainak hatálya alá.
- 48** Ezt az anyagot tilos szállítani, ha 20%-nál több hidrogén-cianidot tartalmaz.
- 59** Ezek az anyagok nem tartoznak az ADR előírásainak hatálya alá, ha legfeljebb 50% magnéziumot tartalmaznak.
- 60** Amennyiben a koncentráció meghaladja a 72%-ot, az anyag nem szállítható.
- 61** A műszaki névnek, aminek a helyes szállítási megnevezést kell kiegészítenie, az elfogadott ISO névnek, (lásd az ISO 1750:1981 „Peszticidek és más agrokemikáliák – szokásos elnevezések” c. szabványt módosított formában) vagy „A WHO ajánlása a peszticidek veszély szerinti osztályozására és az osztályozás irányelvei” („The WHO Recommended Classification of Pesticides by Hazard and Guidelines to Classification”) c. kiadványban felsorolt névnek, illetve a hatóanyag nevének kell lennie (lásd a 3.1.2.8.1 és a 3.1.2.8.1.1 pontot is).

- 62** Ez az anyag nem tartozik az ADR előírásainak hatálya alá, ha nem tartalmaz 4%-nál több nátrium-hidroxidot.
- 65** A hidrogén-peroxid vizes oldatok 8%-nál kisebb hidrogén-peroxid tartalommal nem tartoznak az ADR előírásainak hatálya alá.
- 103** Az ammónium-nitritek, valamint a szervesetlen nitritek keverékei ammóniumsóval nem szállíthatók.
- 105** Az UN 2556 vagy UN 2557 leírásának megfelelő nitrocellulóz a 4.1 osztályba sorolható.
- 113** A vegyileg nem állandó keverékek nem szállíthatók.
- 119** Hűtőgépeknek számítanak azok a gépek vagy készülékek, amelyek belső tere élelmiszerek és egyéb cikkek alacsony hőmérsékleten való tartására szolgál, valamint a légkondicionáló berendezések. Nem tartoznak az ADR előírásainak hatálya alá azok a hűtőgépek és hűtőgép részegységek, amelyek a 2 osztály 2.2.2.1.3 pont szerinti A vagy O csoportjába tartozó gázból 12 kg-nál kevesebbet, illetve 12 l-nél kevesebb ammóniaoldatot (UN 2672) tartalmaznak.
- 122** A járulékos veszélyeket, az esetleges szabályozási és vészhőmérsékletet és az UN számot (generikus tételt) a jelenleg besorolt szerves peroxid készítményekhez a 2.2.52.4 bekezdés tartalmazza.
- 127** Egyéb inert anyag vagy inert anyag keverék használható, amennyiben ez az inert anyag azonos flegmatizáló tulajdonságokkal rendelkezik.
- 131** A flegmatizált anyagnak lényegesen érzéketlenebbnek kell lennie, mint a száraz PETN.
- 135** A diklór-izocianursav dihidratált nátrium-sója nem tartozik az ADR előírásainak hatálya alá.
- 138** A p-bróm-benzil-cianid nem tartozik az ADR előírásainak hatálya alá.
- 141** Azok az anyagok, amelyeket megfelelő hőkezelésnek vetettek alá, és ezáltal nem jelentenek veszélyt a szállítás alatt, nem tartoznak az ADR előírásainak hatálya alá.
- 142** A legfeljebb 1,5% olaj-, és legfeljebb 11% nedvességtartalmú, oldószerrel extrahált szójaliszt, amely gyakorlatilag nem tartalmaz gyúlékony oldószert, nem tartozik az ADR előírásainak hatálya alá.
- 144** A legfeljebb 24 tf.% alkoholt tartalmazó vizes oldat nem tartozik az ADR előírásainak hatálya alá.
- 145** A III csomagolási csoportba tartozó alkoholos italok legfeljebb 250 liter űrtartalmú tartályokban szállítva nem tartoznak az ADR előírásainak hatálya alá.
- 152** Ezen anyag besorolása a szemcsemérettől és a csomagolástól függően változik, de a határokat kísérletileg még nem állapították meg. A megfelelő besorolást a 2.2.1 szakasz előírásai szerint kell elvégezni.
- 153** Ezt a tételt csak akkor lehet alkalmazni, ha a vizsgálatok alapján bizonyított, hogy az anyagok vízzel érintkezve nem gyúlékonyak, nem mutatnak öngyulladás hajlamot és a fejlődött gázok keveréke sem gyúlékony.

- 162** (törölve)
- 163** A 3.2 fejezet „A” táblázatában név szerint említett anyag ilyen tételként nem szállítható. Az ilyen tételként szállított anyagok legfeljebb 20% olyan nitrocellulózt tartalmazhatnak, amely legfeljebb 12,6% nitrogént tartalmaz (száraz tömegre vetítve).
- 168** Azok az azbesztek, amelyek természetes vagy mesterséges kötőanyagba (pl. cement, műanyagok, aszfalt, gyanták vagy ásványérc) oly módon vannak beágyazva vagy azon rögzítve, hogy abból belélegezhető azbeszt szálak a szállítás során veszélyes mennyiségben nem szabadulhatnak ki, nem tartoznak az ADR előírásainak hatálya alá. Azok az azbesztet tartalmazó gyártmányok, amelyek ezt a feltételt nem elégítik ki, de úgy vannak csomagolva, hogy belélegezhető azbeszt szálak a szállítás során veszélyes mennyiségben nem szabadulhatnak ki, nem tartoznak az ADR előírásainak hatálya alá.
- 169** A ftálsavanhidrid szilárd állapotban és a tetrahydro-ftálsavanhidridek legfeljebb 0,05% maleinsavanhidriddel nem tartozik az ADR előírásainak hatálya alá. A legfeljebb 0,05% maleinsavanhidridet tartalmazó, olvasztott ftálsavanhidridet lobbánáspontján vagy annál magasabb hőmérsékleten az UN 3256 alá kell besorolni.
- 172** A járulékos veszéllyel rendelkező radioaktív anyagok esetén:
- a) a küldeménydarabokat el kell látni az anyagra jellemző minden járulékos veszélynek megfelelő veszélyességi bárcával; a járműveken és a konténereken pedig az ezeknek megfelelő nagybárcákat kell az 5.3.1 szakasz vonatkozó előírásai szerint elhelyezni;
  - b) amennyiben szükséges, a radioaktív anyagot az I, a II vagy a III csomagolási csoporthoz a 2. részben a döntő járulékos veszélyre előírt csoportba sorolási kritériumok szerint kell hozzárendelni.
- Az 5.4.1.2.5.1 b) pontban előírt leírásnak tartalmaznia kell a járulékos veszély leírását (pl. „Járulékos veszély: 3, 6.1”), azon összetevők megnevezését, amelyek ezen veszély(ek)e)t túlnyomórészt okozzák, és amennyiben van, a csomagolási csoportot is.
- 177** A bárium-szulfát nem tartozik az ADR előírásainak hatálya alá.
- 178** Ezt a megnevezést csak a származási ország illetékes hatóságának engedélyével (lásd a 2.2.1.1.3 pontot) lehet használni, és csak akkor, ha egyéb alkalmas megnevezés nincs a 3.2 fejezet „A” táblázatában.
- 181** Az ilyen típusú anyagot tartalmazó küldeménydarabokat kiegészítésképpen el kell látni 1 számú veszélyességi bárcával (lásd az 5.2.2.2.2 pontot), kivéve, ha a származási ország illetékes hatósága engedélyezte ezen bárca elhagyását kifejezetten az alkalmazott csomagolásra, mivel a vizsgálatok eredményei bizonyították, hogy az anyag ebben a csomagolásban nem robbanásveszélyes (lásd az 5.2.2.1.9 pontot).
- 182** Az alkálifémek csoportját a lítium, a nátrium, a kálium, a rubídium és a cézium alkotja.
- 183** Az alkáliföldfémek csoportját a magnézium, a kalcium, a stroncium és a bárium alkotja.

- 186** Az ammónium-nitrát tartalom meghatározása során mindazon nitrát-ion mennyiséget, amellyel egyenérték tömegű ammónium-ion van jelen a keverékben, ammónium-nitrátként kell számításba venni.
- 188** Nem tartoznak az ADR előírásainak hatálya alá azok a cellák és akkumulátorok, amelyek megfelelnek a következő előírásoknak:
- a) egy fémlítium- vagy lítiumötvözet-cella legfeljebb 1 g lítiumot tartalmaz, illetve lítiumion cella esetén a névleges kapacitás legfeljebb 20 Wh;
  - b) egy fémlítium- vagy lítiumötvözet-akkumulátor összesen legfeljebb 2 g lítiumot tartalmaz, illetve lítiumion akkumulátor esetén a névleges kapacitás legfeljebb 100 Wh. Az ezen követelménynek megfelelő lítiumion akkumulátornak a külső házán fel kell tüntetni a névleges kapacitást (Wh-ban), kivéve a 2009. január 1-je előtt gyártott akkumulátorokat, amelyek ezen különleges előírás szerint 2010. december 31-ig szállíthatók anélkül, hogy a jelölés rajtuk lenne;
  - c) minden cella, ill. akkumulátor olyan típusú, amelyről bizonyított, hogy a „Vizsgálatok és kritériumok kézikönyv” III. rész 38.3 pontjának minden vizsgálati követelményének megfelel;
  - d) a cellákat, ill. akkumulátorokat, kivéve, ha készülékben vannak, a cellát, ill. akkumulátort teljesen magába foglaló belső csomagolásba kell helyezni. A cellákat, ill. akkumulátorokat a rövidzárlat ellen védeni kell. A védelemnek ki kell terjednie az ugyanabban a csomagolásban lévő vezetőképes anyaggal való érintkezésre is, mivel az is rövidzárlatot okozhat. A belső csomagolást a 4.1.1.1, a 4.1.1.2 és a 4.1.1.5 bekezdés előírásainak megfelelő, erős külső csomagolásba kell helyezni;
  - e) a készülékben lévő cellákat, ill. akkumulátorokat sérülés és rövidzárlat ellen védeni kell, és a készüléket olyan hatékony eszközzel kell ellátni, amely megakadályozza, hogy véletlenszerűen működésbe lépjen. Készülékben lévő akkumulátorok esetén a készüléket olyan erős külső csomagolóeszközbe kell csomagolni, amely a csomagolóeszköz ürtartalmának és rendeltetésének megfelelő szilárdságú, alkalmas anyagból és kialakítással készült, kivéve ha a készülék maga ugyanilyen védelmet nyújt a benne lévő akkumulátornak.
  - f) az olyan küldeménydarabot, amely négynél több, készülékben lévő cellát, vagy kettőnél több készülékben lévő akkumulátort tartalmaz, a következőképpen kell megjelölni:
    - i) fel kell rajta tüntetni, hogy „fémlítium”, ill. „lítiumion” cellát, ill. akkumulátort tartalmaz;
    - ii) fel kell rajta tüntetni, hogy a küldeménydarabot óvatosan kell kezelni és a küldeménydarab sérülése tűzveszélyt okoz;
    - iii) fel kell rajta tüntetni, hogy a küldeménydarab sérülése esetén különleges eljárásra (ellenőrzésre, átcsomagolásra) van szükség;
    - iv) fel kell rajta tüntetni a további információért hívható telefonszámot;
  - g) az f) pont szerinti jelöléssel ellátott küldeménydarabo(ka)t tartalmazó küldeményhez olyan okmányt kell mellékelni, amely a következőket tartalmazza

- i) utalást arra, hogy a küldeménydarab „fémlítium”, ill. „lítiumion” cellát, ill. akkumulátort tartalmaz;
  - ii) utalást arra, hogy a küldeménydarabo(ka)t óvatosan kell kezelni és a küldeménydarab(ok) sérülése tűzveszélyt okoz;
  - iii) utalást arra, hogy a küldeménydarab sérülése esetén különleges eljárásra (ellenőrzésre, átcsomagolásra) van szükség;
  - iv) a további információért hívható telefonszámot;
- h) a készülékben lévő akkumulátorokat tartalmazók kivételével minden küldeménydarabnak alkalmasnak kell lennie, hogy elviselje az 1,2 m-ről bármilyen helyzetben végrehajtott ejtési próbát anélkül, hogy a benne levő cellák vagy akkumulátorok megsérülne, a tartalom olyan mértékben elmozdulna, ami az akkumulátorok (vagy a cellák) érintkezését eredményezi, ill. a tartalom kiszabadulna; és
- i) egy küldeménydarab bruttó tömege legfeljebb 30 kg lehet, kivéve, ha készülékben lévő vagy készülékkel egybeeső akkumulátorokat tartalmaz.

Az előzőekben, illetve bárhol az ADR-ben szereplő „lítiumtartalom” egy fémlítium vagy lítiumötvözet cella anódjában levő lítium tömegét jelenti.

A fémlítium és a lítiumion akkumulátorokra külön tételek vannak, hogy különböző módon lehessen szállítani, ill. eltérő vészhelyzeti eljárásokat lehessen alkalmazni.

- 190** Az aeroszol csomagolásokat az akaratlan működtetés ellen védelemmel kell ellátni. A legfeljebb 50 ml űrtartalmú aeroszolak, amelyek csak nem mérgező alkotórészeket tartalmaznak, nem tartoznak az ADR előírásainak hatálya alá.
- 191** A legfeljebb 50 ml űrtartalmú, kisméretű tartályok, amelyek csak nem mérgező alkotórészeket tartalmaznak, nem tartoznak az ADR előírásainak hatálya alá.
- 194** Az esetleges szabályozási és vészhőmérsékletek és az UN számok (generikus tételek) a jelenleg besorolt önreaktív anyagokhoz a 2.2.41.4 bekezdésben találhatók.
- 196** Azok a készítmények szállíthatók e tételként, amelyek a laboratóriumi vizsgálat során nem detonálnak kavitált állapotban, nem deflagrálnak, nem mutatnak semmiféle hatást zárt térben hevítve és nincs robbanóerejük. A készítménynek termikusan stabilnak kell lennie (öngyorsuló bomlási hőmérséklet 50 kg-os küldeménydarabban 60 °C vagy annál magasabb). Az e kritériumokat nem teljesítő készítményeket az 5.2 osztály előírásai szerint kell szállítani (lásd a 2.2.52.4 bekezdést).
- 198** A legfeljebb 20% nitrocellulóz tartalmú nitrocellulóz oldatok festékként vagy nyomdafestékként szállíthatók (lásd UN 1210, UN 1263, UN 3066, UN 3469 és UN 3470).
- 199** Azok az ólomvegyületek, amelyek 0,07M sósavoldattal 1:1000 arányban vegyítve, 23°C ± 2 °C-on történő, egy órán keresztül tartó keveréssel legfeljebb 5%-ban oldhatók (lásd az ISO 3711:1990 „Ólom-kromát pigmentek és ólom-kromát/ólom-molibdát pigmentek – Meghatározások és vizsgálati módszerek” c. szabványt), oldhatatlannak tekinthetők és nem tartoznak az ADR előírásainak hatálya alá, kivéve, ha valamely más osztály besorolási kritériumainak megfelelnek.

- 201** Az öngyújtóknak és öngyújtó utántöltőknek meg kell felelniük azon ország előírásainak, ahol megtöltötték. A véletlen működésbe lépés ellen védeni kell. A gáz folyadékfázisa 15 °C-on nem haladhatja meg a tartály űrtartalmának 85%-át. A tartályoknak, beleértve a zárószervezeteket, el kell viselniük a cseppfolyósított szénhidrogén-gáz által 55 °C-on kifejtett nyomás kétszeresével egyenlő belső nyomást. A szelepeket és a gyújtószervezetet reteszeléssel, tapadószalagos lezárással vagy más alkalmas módon rögzíteni kell, vagy eleve úgy kell kialakítani, hogy a szállítás alatt ne léphessen működésbe, ill. a tartalom ne szabadulhasson ki. Az öngyújtók nem tartalmazhatnak 10 g-nál több cseppfolyósított szénhidrogén-gázt. Az öngyújtó utántöltők nem tartalmazhatnak 65 g-nál több cseppfolyósított szénhidrogén-gázt.

*Megjegyzés: Az elkülönítve összegyűjtött hulladék öngyújtókra lásd a 3.3 fejezet 654 különleges előírását.*

- 203** Ez a tétel nem használható az UN 2315 folyékony, poliklórozott bifenilekhez és az UN 3432 szilárd, poliklórozott bifenilekhez.

- 204** (törölve)

- 205** Ez a tétel nem használható az UN 3155 pentaklór-fenolhoz.

- 207** A polimer gyöngyök és sajtolóanyagok lehetnek polisztirolból, poli(metil-metakrilát)-ból vagy más polimerből.

- 208** A kalcium-nitrát műtrágyák kereskedelmi formái, amelyek főleg kettős sóból (kalcium-nitrátból és ammónium-nitrátból) állnak és nem tartalmaznak 10%-nál több ammónium-nitrátot, de legalább 12% kristályvíz tartalmúak, nem tartoznak az ADR előírásainak hatálya alá.

- 210** A fertőző anyagokat tartalmazó növényi, állati vagy baktérium forrásokból származó toxinokat és a fertőző anyagokban levő toxinokat a 6.2 osztályba kell besorolni.

- 215** Ez a tétel csak az olyan, technikailag tiszta anyagra, illetve belőle készült formulázásokra vonatkozik, amelyek ÖBH-ja (öngyorsuló bomlási hőmérséklete) meghaladja a 75 °C-ot. Nem vonatkozik tehát olyan formulázásokra, amelyek önreaktív anyagok. (Az önreaktív anyagokra lásd a 2.2.41.4 bekezdést.)

A legfeljebb 35 tömeg% azo-dikarbonamidot és legalább 65 tömeg% inert anyagot tartalmazó homogén keverékek nem tartoznak az ADR előírásainak hatálya alá, kivéve, ha más osztály kritériumait is kielégítik.

- 216** Az ADR előírásainak hatálya alá nem tartozó szilárd anyagok és gyúlékony folyadékok keverékei e tétel alatt szállíthatók anélkül, hogy előzetesen a 4.1 osztály besorolási kritériumait alkalmazzák, amennyiben az anyag berakodása során, illetve a csomagolóeszköz, a jármű vagy a konténer lezárásakor szabad folyadék szemmel nem látható. Nem tartoznak az ADR hatálya alá azok a légmentesen zárt csomagolások, ill. tárgyak, melyek a II vagy a III csomagolási csoportba tartozó gyúlékony folyadékot tartalmaznak szilárd anyagban abszorbeálva, 10 ml-nél kisebb mennyiségben, ha a csomagolásban, ill. a tárgyban nincs szabad folyadéktartalom.

- 217** Az ADR előírásainak hatálya alá nem tartozó szilárd anyagok és mérgező folyadékok keverékei e tétel alatt szállíthatók anélkül, hogy előzetesen a 6.1 osztály besorolási kritériumait alkalmazzák, amennyiben az anyag berakodása során, illetve a csomagolóeszköz, a jármű vagy a konténer lezárásakor szabad folyadék szemmel nem látható. Ez a tétel nem használható az I csomagolási csoportba tartozó folyadékot tartalmazó szilárd anyagokhoz.

- 218** Az ADR előírásainak hatálya alá nem tartozó szilárd anyagok és maró folyadékok keverékei e tétel alatt szállíthatók anélkül, hogy előzetesen a 8 osztály besorolási kritériumait alkalmazzák, amennyiben az anyag berakodása során, illetve a csomagolóeszköz, a jármű vagy a konténer lezárásakor szabad folyadék szemmel nem látható.
- 219** Azokat a géntechnológiával módosított mikroorganizmusokat és géntechnológiával módosított élő szervezeteket, amelyek a 2.2.62 szakasz szerint kielégítik a fertőző anyag meghatározását és a 6.2 osztályba sorolás feltételeit, az esettől függően az UN 2814, az UN 2900, ill. az UN 3373 tételként kell szállítani.
- 220** Csak az oldat vagy keverék gyúlékony folyadék összetevőjének műszaki nevét kell a helyes szállítási megnevezés után zárójelben feltüntetni.
- 221** Az I csomagolási csoportba tartozó anyagokat nem lehet ebbe a tételbe felvenni.
- 224** Hacsak vizsgálatokkal nem lehet bizonyítani, hogy az érzékenység fagyasztott állapotban nem nagyobb, mint folyékony állapotban, a hajtóanyagnak normális szállítási feltételek között folyékony állapotban kell maradnia, és -15 °C feletti hőmérsékleten nem szabad megfagynia.
- 225** Az e tétel alá sorolt tűzoltókészülékek tartalmazhatnak beépített működtető töltetet (az 1.4C vagy 1.4S osztályozási kód alá tartozó munkavégző töltetet), anélkül, hogy a 2 osztály 2.2.2.1.3 pont szerinti A vagy O csoportjába történő besorolás megváltozna, feltéve, hogy a deflagráló robbanóanyag (hajtóanyag) összes mennyisége nem haladja meg tűzoltókészülékenként a 3,2 g-ot.
- 226** Ennek az anyagnak azok a formulázásai, amelyek legalább 30% nem illékony, nem gyúlékony flegmatizálószer tartalmaznak, nem tartoznak az ADR előírásainak hatálya alá.
- 227** Ha a flegmatizáláshoz vizet és szervesetlen, inert anyagot használnak, a karbamid-nitrát tartalom nem haladhatja meg a 75 tömeg%-ot, és a keverék a „Vizsgálatok és kritériumok kézikönyv” I. Rész szerinti 1 vizsgálati sorozat, a) próbája során nem lehet képes a detonálásra.
- 228** Azokat a keverékeket, amelyek a gyúlékony gázokra vonatkozó kritériumok (lásd a 2.2.2.1.5 pontot) szerint nem gyúlékonyak, az UN 3163 tételként kell szállítani.
- 230** Ez a tétel a lítiumot bármilyen formában (beleértve a lítium polimert is) tartalmazó cellákra és akkumulátorokra, valamint a lítium-ion cellákra és akkumulátorokra vonatkozik.

A lítium-cellák és -akkumulátorok e tétel alatt akkor szállíthatók, ha kielégítik a következő követelményeket:

- a) minden cella és akkumulátor olyan típusú, amelyről bizonyított, hogy a „Vizsgálatok és kritériumok kézikönyv” III. rész 38.3 pontjának minden vizsgálati követelményének megfelel;
- b) minden cellát és akkumulátort el kell látni biztonsági szellőző készülékkel, vagy olyan szerkezeti kialakításúnak kell lenniük, hogy normális szállítási körülmények között hirtelen felszakadásuk ne következhesen be;
- c) minden cellát és akkumulátort el kell látni hatékony szerkezettel a külső rövidzárlat megakadályozására;

- d) a több cellából álló vagy párhuzamos kapcsolású cellákat tartalmazó akkumulátorokat hatékony szerkezettel (pl. diódákkal, biztosítókkal stb.) kell ellátni a veszélyes visszaram kiküszöbölésére.
- 235** Ez a tétel azokra a tárgyakra vonatkozik, amelyek az 1 osztályba tartozó robbanóanyagot tartalmaznak és emellett tartalmazhatnak egyéb osztályba tartozó veszélyes árut is, és amelyeket járművekben életmentő légszák gázgenerátorként, légszák modulként vagy biztonsági öv előfeszítőként használnak.
- 236** A poliészter gyanta készlet két komponensből áll: az alapanyagból (3 osztály, II vagy III csomagolási csoport) és az aktiváló anyagból (szerves peroxidokból). A szerves peroxidnak D, E vagy F típusúnak kell lennie és nem igényelhet hőmérséklet-szabályozást. A csomagolási csoportnak a 3 osztály feltételei szerint az alapanyagra meghatározva II-nek vagy III-nak kell lennie. A 3.2 fejezet „A” táblázatának 7a oszlopában látható mennyiségi határokat az alapanyagra kell alkalmazni.
- 237** A membránszűrők, beleértve a szállításnál jelen lévő papír szeparátorokat, bevonó és hordozó anyagokat stb., nem lehetnek hajlamosak a detonáció továbbvitelére a „Vizsgálatok és kritériumok kézikönyv” I. Rész 1.a) vizsgálati sorozat szerinti bármely próba során.
- Ezen kívül az illetékes hatóság megfelelő égési sebesség vizsgálatok eredményei alapján (figyelembe véve a „Vizsgálatok és kritériumok kézikönyv” III. Rész 33.2.1 bekezdésében található standard vizsgálatokat) meghatározhatja, hogy a nitrocellulóz membránszűrők abban a formában, ahogyan szállítják, nem tartoznak a 4.1 osztályba tartozó gyúlékony szilárd anyagokra vonatkozó előírások hatálya alá.
- 238** a) Az akkumulátortelemek akkor tekinthetők kifolyásmentesnek, amennyiben képesek ellenállni a következők szerinti rezgés- és nyomáskülönbség-vizsgálatoknak az akkumulátorfolyadék kifolyása nélkül.
- Rezgésvizsgálat: az akkumulátort mereven rögzíteni kell a rázóasztal lapjára és egyszerű harmonikus rezgőmozgásnak kell kitenni, amelynek amplitúdója 0,8 mm (1,6 mm maximális kitérés). A frekvenciát 1 Hz/min sebességgel kell változtatni 10 Hz és 55 Hz határok között. A teljes frekvenciamenetnek és a visszatérésnek 95 ± 5 perc alatt kell végbemennie minden egyes szerelési helyzetben (rezgési irány). Az akkumulátort három egymásra kölcsönösen merőleges helyzetben (beleértve a töltőnyílások és szellőzőnyílások, ha ilyenek vannak, fordított helyzetben történő vizsgálatát) azonos időtartamig kell vizsgálni.
- Nyomáskülönbség vizsgálat: a rezgésvizsgálatot követően az akkumulátorokat 6 órán át 24 °C ± 4 °C-on kell tárolni, miközben legalább 88 kPa nyomáskülönbségnek kell kitenni. Az akkumulátorokat három egymásra kölcsönösen merőleges irányban (beleértve a töltőnyílások és szellőzőnyílások, ha ilyenek vannak, fordított helyzetben történő vizsgálatát) minden egyes helyzetben legalább 6 órán át kell vizsgálni.
- b) A kifolyásbiztos akkumulátortelemek nem tartoznak az ADR előírásainak hatálya alá abban az esetben, ha 55 °C-on az elektrolit nem folyik ki a sérült vagy repedt akkumulátorból, és nincs szabad folyadék, ami kifolyhatna, illetve a szállításra kész csomagolásban a sorkapcsok a rövidzárlat ellen védve vannak.
- 239** Az akkumulátorok vagy cellák nátriumon, kénen és/vagy poliszulfidokon kívül nem tartalmazhatnak más veszélyes anyagot. Az akkumulátorok vagy cellák olyan hőmérsékleten, amelynél a bennük levő elemi nátrium folyékonnyá válhat, csak a származási ország illetékes hatóságának jóváhagyásával és az általa meghatározott

feltételek mellett adhatók fel szállításra. Ha a származási ország nem valamely ADR Szerződő Fél, akkor a küldemény által érintett első ADR Szerződő Fél illetékes hatóságának kell a jóváhagyást és a szállítási feltételeket elismernie.

A celláknak tömören zárt fémházakból kell állniuk, melyek a veszélyes anyagokat teljesen magukba zárják, és kialakításuk és zárásuk normális szállítási feltételek mellett megakadályozza ezen anyagok kiszabadulását.

Az akkumulátoroknak fémházba teljesen bezárt és rögzített cellákból kell állniuk, amelynél a ház kialakítása és zárása normális szállítási feltételek mellett megakadályozza a veszélyes anyagok kiszabadulását.

- 241** A formulázást úgy kell készíteni, hogy a szállítás alatt homogén maradjon és ne váljon szét. Nem tartoznak az ADR előírásainak hatálya alá alacsony nitrocellulóz tartalmú formulázások, amelyek a „Vizsgálatok és kritériumok kézikönyv” I. Rész 1.a), 2.b), illetve 2.c) vizsgálati sorozat szerint elvégzett, zárt térben való hevítés hatására történő detonálási, deflagrálsai vagy robbanási tulajdonságok vizsgálata során nem mutatnak semmiféle veszélyes tulajdonságot, és a „Vizsgálatok és kritériumok kézikönyv” III. Rész 33.2.1.4 bekezdése szerinti N.1 vizsgálatban nem viselkednek gyúlékony szilárd anyagként (ehhez a vizsgálathoz a lemezes anyagot szükség esetén meg kell őrölni és szitálni, hogy szemcsemérete 1,25 mm-nél kisebb legyen).
- 242** A kén nem tartozik az ADR előírásainak hatálya alá, ha különleges alakúra van formázva (pl. szemcsés, granulált, pellet, pasztilla vagy pehely).
- 243** A szikragyújtású motorokhoz (pl. gépjárművekhez, helyhez kötött és egyéb motorokhoz) használt motorbenzint, benzint és gázolint e tétel alá kell besorolni, függetlenül az eltérő illékonyaságuktól.
- 244** E tétel alá tartozik pl. az alumíniumhamu, alumíniumsalak, alumínium leförlözés, elhasználdott katódok, elhasználdott üstbélések és alumíniumsó salak.
- 247** A 24 tf.%-nál több, de legfeljebb 70 tf.% alkoholtartalmú alkoholos italok, ha a gyártási eljárás részeként szállítják, a 4.1.1 szakasz általános előírásainak megfelelő, 250 liternél nagyobb, de legfeljebb 500 liter űrtartalmú fahordókban is szállíthatók a következő feltételek mellett:
- a) a fahordókat töltés előtt szemrevételezni és tömíteni kell;
  - b) megfelelő folyadékmentes teret kell hagyni (legalább 3%), lehetővé téve a folyadék tágulását;
  - c) a fahordókat a hordónyílással fölfelé kell szállítani; és
  - d) a fahordókat „A Biztonságos Konténerekről szóló 1972. évi Nemzetközi Egyezmény” (CSC) módosított kiadása követelményeit kielégítő konténerekben kell szállítani. Minden fahordót hozzá igazított keretvázban kell rögzíteni és megfelelő módon ki kell ékelni, megakadályozva bármilyen irányú elmozdulást a szállítás alatt.
- 249** A korrózióval szemben stabilizált ferrocérium (tűzkő) legalább 10% vastartalommal nem tartozik az ADR előírásainak hatálya alá.
- 250** Ez a tétel csak az elemzési célokra szolgáló vegyi anyag mintákhoz használható a „Vegyifegyverek kifejlesztésének, gyártásának, felhalmozásának és használatának tilalmáról, valamint megsemmisítéséről szóló Egyezmény” teljesítésével

kapcsolatosan. Az anyagok szállítása ezen tétel alatt a Vegyifegyver Tilalmi Szervezet által meghatározott felügyeleti rendszabályokkal és biztonsági eljárások szerint végezhető.

A vegyianyag minta csak az illetékes hatóság vagy a Vegyifegyver Tilalmi Szervezet főigazgatójának előzetes engedélyével szállítható, amennyiben a minta kielégíti a következő feltételeket:

- a) az ICAO Műszaki Utasítások (ICAO-TI) 623 csomagolási utasítása szerint (lásd a Kiegészítés S-3-8 pontját) kell csomagolni, és
- b) a szállítás idején a fuvarokmányhoz kell csatolni a szállítást engedélyező okmány egy példányát, amely feltünteti a mennyiségi korlátozást és a csomagolási utasítást is.

- 251** Az UN 3316 vizsgálókészlet vagy elsősegély felszerelés tétel olyan dobozokra, kazettákra stb. vonatkozik, amelyek különböző vegyianyagokat tartalmaznak kis mennyiségben, amelyeket például gyógyászati, analitikai, vizsgálati vagy javítási célra használnak. Az ilyen vizsgálókészletek és felszerelések nem tartalmazhatnak a 3.2 fejezet „A” táblázat 7a oszlopában „LQ0” kóddal megjelölt anyagokat.

Az alkotórészek nem reagálhatnak egymással veszélyesen (lásd a „veszélyes reakciót” az 1.2.1 szakaszban). A veszélyes anyag összes mennyisége vizsgálókészletenként vagy felszerelésenként nem haladhatja meg az 1 litert vagy 1 kg-ot. A vizsgálókészlet vagy felszerelés egészét a benne levő anyagokhoz tartozó legszigorúbb csomagolási csoportba kell sorolni.

Azok a vizsgálókészletek vagy felszerelések, amelyeket a járműveken elsősegély vagy helyi felhasználás céljából szállítanak, nem tartoznak az ADR előírásainak hatálya alá.

A 3.4 fejezet szerint szállíthatók azok a vizsgálókészletek és elsősegély felszerelések, amelyeknél a belső csomagolásban a veszélyes áru mennyisége nem haladja meg azt a korlátozott mennyiségre vonatkozó határt, amelyet a 3.2 fejezet „A” táblázat 7a oszlopában az egyes anyagokra megadott LQ kódhoz a 3.4.6 szakasz meghatároz.

- 252** Az ammónim-nitrát vizes oldata legfeljebb 0,2% éghető anyag tartalommal és legfeljebb 80%-os koncentrációval nem tartoznak az ADR előírásainak hatálya alá, feltéve, hogy az ammónium-nitrát a szállítás alatt minden körülmények között oldatban marad.
- 266** Ez az anyag a megadottnál kevesebb alkohol-, víz- vagy flegmatizálószer-tartalommal csak az illetékes hatóság külön engedélyével szállítható (lásd a 2.2.1.1 bekezdést).
- 267** A klorátokat tartalmazó, C típusú robbantóanyagokat el kell különíteni az ammónium-nitrátot vagy más ammóniumsót tartalmazó robbanóanyagoktól.
- 270** Az 5.1 osztályba tartozó szervesetlen, szilárd nitrátok azon vizes oldatai, amelyek koncentrációja nem haladja meg a szállítás alatt felléphető legkisebb hőmérséklethez tartozó telítési határ 80%-át, úgy tekinthetők, hogy nem rendelkeznek az 5.1 osztály kritériumaival.
- 271** Flegmatizálószerként laktóz, glukóz vagy hasonló anyagok használhatók, feltéve, hogy az anyag legalább 90 tömeg% flegmatizálószeret tartalmaz. Az illetékes hatóság a „Vizsgálatok és kritériumok kézikönyv” I. Rész 16. fejezet 6 vizsgálati sorozat c)

próba alapján, amelyet legalább 3, szállításra előkészített csomagoláson hajtottak végre, engedélyezheti ezen keverék 4.1 osztályba történő besorolását. A legalább 98 tömeg% flegmatizálószer-tartalmú keverékek nem tartoznak az ADR előírásainak hatálya alá. A legalább 90 tömeg% flegmatizálószer-tartalmú keverékeket tartalmazó küldeménydarabokat nem kell 6.1 számú bárcával ellátni.

- 272** Ez az anyag a 4.1 osztály anyagaként csak az illetékes hatóság külön engedélyével szállítható (lásd UN 0143).
- 273** Az önmelegedéssel szemben stabilizált manebet és maneb készítményeket nem kell a 4.2 osztályba sorolni, ha vizsgálatokkal bizonyítható, hogy az anyag 1 m<sup>3</sup>-es kockája nem mutat öngyulladás hajlamot és a hőmérséklet a minta közepén nem haladja meg a 200 °C-ot, ha a mintát 24 órán át legalább 75 °C ± 2 °C-on tartják.
- 274** A 3.1.2.8 bekezdés előírásait kell alkalmazni.
- 278** Ez az anyag csak akkor sorolható be és szállítható, ha az illetékes hatóság a szállításra előkészített csomagoláson végzett, a „Vizsgálatok és kritériumok kézikönyv” I. Rész 2 vizsgálati sorozat és a 6 vizsgálati sorozat c) próba eredménye alapján (lásd a 2.2.1.1 bekezdést) engedélyezte. A csomagolási csoportot a 2.2.3 szakasz kritériumai és a 6 vizsgálati sorozat c) próbához használt csomagolóeszköz típusa alapján kell az illetékes hatóságnak meghatározni.
- 279** Az anyag besorolása vagy csomagolási csoporthoz rendelése sokkal inkább az embereken szerzett tapasztalatokon, semmint az ADR-ben található besorolási kritériumok szigorú alkalmazása alapján történt.
- 280** E tétel alá tartoznak azok a járművekben használt életmentő légszák gázgenerátorok, légszák modulok és biztonsági öv előfeszítők, amelyek az 1 osztályba vagy más osztály(ok)ba tartozó veszélyes árukat tartalmaznak, ha alkatrész-egységként szállítják és ha a szállításra kész csomagolásban a „Vizsgálatok és kritériumok kézikönyv” I. Rész 6.c) vizsgálati sorozat szerint bevizsgálták és ennek során nem robbantak fel, burkolatuk vagy a nyomástartó edény nem tört szét és nem következett be veszélyes kivetődés vagy hőhatás, ami jelentősen akadályozná a tűzoltást vagy más vészhelyzeti intézkedés végrehajtását a közvetlen környezetben.
- 282** (törölve)
- 283** A lengéscsillapítóként szolgáló, gázt tartalmazó tárgyak, beleértve az ütközési energia elnyelésére használt eszközöket és a légrugókat, nem tartoznak az ADR előírásainak hatálya alá, feltéve, hogy:
- a) a gáztér űrtartalma legfeljebb 1,6 liter és a töltési nyomás legfeljebb 280 bar, úgy, hogy az űrtartalom (liter) és a töltési nyomás (bar) szorzata legfeljebb 80 (azaz 0,5 literes gáztér és 160 bar töltési nyomás, 1 literes gáztér és 80 bar töltési nyomás, 1,6 literes gáztér és 50 bar töltési nyomás, 0,28 literes gáztér és 280 bar töltési nyomás);
  - b) a legkisebb repesztőnyomás a legfeljebb 0,5 literes gázterű gyártmányoknál a 20 °C-hoz tartozó töltési nyomás 4-szerese, a 0,5 literesnél nagyobb gázterű gyártmányoknál a 20 °C-hoz tartozó töltési nyomás 5-szöröse;
  - c) olyan anyagból készültek, amelyből törés esetén nem képződnek szilánkok;
  - d) az illetékes hatóság által elfogadott minőségbiztosítási rendszernek megfelelően gyártották;

- e) a gyártási típus tűzállósági vizsgálata bizonyítja, hogy az olvadóbiztosíték vagy a belső nyomást csökkentő biztonsági szelep által olyan mértékben csökken a szerkezetben a nyomás, hogy az nem törik el, illetve nem vetődik ki.

A járművek üzemelése során használt felszerelésekre lásd az 1.1.3.2 d) pontot.

- 284** A gyújtó hatású anyagot tartalmazó kémiai oxigénfejlesztőknek a következő feltételeknek kell megfelelniük:
- a) az oxigénfejlesztő, ha robbanóanyagok működtető szerkezetet tartalmaz, csak akkor szállítható ezen tétel alatt, ha a 2.2.1.1.1 b) ponthoz fűzött megjegyzés értelmében nem tartozik az 1 osztályba;
  - b) a csomagolás nélküli oxigénfejlesztőnek a tartalom kiszivárgása, illetve a szerkezet működésbe lépése nélkül ki kell állnia az 1,8 m-ről végrehajtott ejtőpróbát, melynél az ütközőlap merev, rugalmatlan, sík és vízszintes, és az ejtés olyan helyzetben történik, ami a legnagyobb valószínűséggel eredményez sérülést; és
  - c) a működtető szerkezettel ellátott oxigénfejlesztőknél a működtető szerkezetnek legalább két olyan hatásos eszközzel kell rendelkeznie, ami megakadályozza a szerkezet nem szándékos működésbe lépését.
- 286** Az e tétel alá tartozó nitrocellulóz membránszűrők nem tartoznak az ADR előírásainak hatálya alá, ha egyenként valamely tárgyban vagy lezárt csomagban vannak és tömegük legfeljebb 0,5 g.
- 288** Ezek az anyagok csak akkor sorolhatók be és szállíthatók, ha az illetékes hatóság a szállításra előkészített csomagoláson végzett, a „Vizsgálatok és kritériumok kézikönyv” I. Rész 2 vizsgálati sorozat és a 6 vizsgálati sorozat c) próba eredménye alapján (lásd 2.2.1.1 bekezdést) engedélyezte.
- 289** A járműbe szerelt vagy komplett jármű alkatrészekben (kormányoszlop, ajtópanel, ülés stb.) lévő légzsák gázgenerátorok, légzsák modulok és biztonsági öv előfeszítők nem tartoznak az ADR előírásainak hatálya alá.
- 290** Ha ez az anyag valamely más osztály(ok) 2. részben szereplő meghatározásának és kritériumainak is megfelel, akkor a döntő járulékos veszély szerint kell besorolni. Az áru megnevezésének a döntő veszély szerinti osztályban a megfelelő UN számból és helyes szállítási megnevezésből kell állnia, amit ki kell egészíteni a 3.2 fejezet „A” táblázatának 2 oszlopában szereplő, erre az anyagra vonatkozó névvel. Az anyagot az UN számnak megfelelő előírások szerint kell szállítani, emellett az 1.7.1.5 bekezdésben meghatározott követelményeket is be kell tartani, az 5.2.1.7.2 pont kivételével.
- 291** A gyúlékony cseppfolyósított gáznak a hűtőgép szerkezeti elemein belül kell lennie. Ezeket a szerkezeti elemeket a hűtőgép üzemi nyomásának legalább háromszorosára kell méretezni. A hűtőgépet úgy kell méretezni és kialakítani, hogy a cseppfolyósított gázt megtartsa, és normál szállítási feltételek mellett kizárja a nyomástartó szerkezeti elemek törésének vagy repedésének veszélyét. A 12 kg-nál kevesebb gázt tartalmazó hűtőgépek és hűtőgép részegységek nem tartoznak az ADR előírásainak hatálya alá.
- 292** A legfeljebb 23,5 térf.% oxigént tartalmazó keverékek szállíthatók ezen tétel alatt, ha más gyújtó hatású gáz nincs a keverékben. E határértéket meg nem haladó koncentrációknál nem szükséges 5.1 számú bárca

- 293** A gyufákra a következő meghatározások vonatkoznak:
- a) a „vihargyufa” olyan gyufa, amelynek feje dörzsölésre érzékeny gyújtóeleggel és pirotechnikai anyaggal van impregnálva, ami kis lánggal vagy láng nélkül, de intenzív hőfejlődéssel ég;
  - b) a „biztonsági gyufa” olyan gyufa, amely dobozban van, illetve levél vagy kártya formájú és csak preparált felületen való dörzsöléssel gyújtható meg;
  - c) a „mindenütt gyulladó gyufa” olyan gyufa, amely bármely szilárd felületen való dörzsöléssel meggyújtató;
  - d) A „Vesta-viasz gyufa” olyan gyufa, amely akár preparált felületen, akár szilárd felületen való dörzsöléssel meggyújtható.
- 295** Ha az egységrakomány el van látva jelöléssel és bárcákkal, az egyes akkumulátorokat nem kell külön jelölni és bárcázni.
- 296** Ide tartoznak a mentőeszközök, pl. mentőtutajok, egyéni mentőeszközök és önfelfúvó csúszdák. Az UN 2990 tétel alá az önfelfúvó mentőeszközök, míg az UN 3072 tétel alá a nem önfelfúvó mentőeszközök tartoznak. A mentőeszközök tartalmazhatnak:
- a) jelzőtesteket (1 osztály), mint pl. füstjelzők vagy fényjelzők olyan csomagolásban, ami megakadályozza, hogy nem szándékosan működésbe lépjenek;
  - b) csak az UN 2990 tétel esetén az önfelfúvó szerkezet aktiválásához az 1.4 alosztály S összeférhetőségi csoportjába tartozó munkavégző tölteteket, amennyiben a robbanóanyag mennyisége készülékenként nem haladja meg a 3,2 g-ot;
  - c) a 2 osztály 2.2.2.1.3 pont szerinti A vagy O csoportjába tartozó sűrített gázokat;
  - d) elektromos akkumulátorokat (8 osztály) és lítium-akkumulátorokat (9 osztály);
  - e) elsősegély felszerelést vagy javítókészleteket kis mennyiségű veszélyes anyag (pl. a 3, 4.1, 5.2, 8 és 9 osztály anyagai) tartalommal; vagy
  - f) „mindenütt gyulladó gyufát” olyan csomagolásban, ami megakadályozza, hogy nem szándékosan működésbe lépjen.
- 298** (törölve)
- 300** A halliszt vagy halhulladék nem rakható be, ha hőmérséklete a berakodáskor nagyobb, mint a 35 °C, ill. a környezeti hőmérsékletet 5 °C-kal meghaladó hőmérséklet, amelyik magasabb.
- 302** A helyes szállítási megnevezésben az „EGYSÉG” jelentése:
- jármű,  
konténer vagy  
tartány.
- A gázosítószer hatása alatt álló járművek, konténerek és tartányok csak az 5.5.2 szakasz előírásainak hatálya alá tartoznak.

- 303** Ezeket a tartályokat a bennük levő gáznak, ill. gázkeveréknek a 2.2.2 szakasz előírásai szerint meghatározott osztályozási kódjához kell besorolni.
- 304** Azok a száraz akkumulátorok, amelyekből a bennük levő maró elektrolit nem folyik ki az akkumulátor ház törése esetén, nem tartoznak az ADR előírásainak hatálya alá, amennyiben az akkumulátorok szorosan vannak csomagolva és rövidzárlat ellen védve vannak. Ilyen akkumulátor például: alkáli-mangán, cink-szén, nikkelfémhidrid és nikkeldkadmium akkumulátor.
- 305** Ezek az anyagok nem tartoznak az ADR előírásainak hatálya alá, ha koncentrációjuk legfeljebb 50 mg/kg.
- 306** Ez a tétel csak olyan anyagokhoz használható, amelyek az 1 osztály 1 és 2 vizsgálati sorozata szerint (lásd „Vizsgálatok és kritériumok kézikönyv”, I. Rész) vizsgálva nem mutatnak az 1 osztályra jellemző robbanási tulajdonságot.
- 307** Ez a tétel csak olyan egynemű keverékekhez használható, amelyek fő alkotórésze az ammónium-nitrát, a következő összetétel határokkal:
- a) legalább 90% ammónium-nitrát legfeljebb 0,2% összes éghető anyag tartalommal (beleértve a szerves anyagokat szénegyenértékre számítva) és esetleges olyan adalékokkal, amelyek szervesetlenek és az ammónium-nitráttal szemben semlegesek; vagy
  - b) 90%-nál kevesebb, de 70%-nál több ammónium-nitrát egyéb szervesetlen anyagokkal, vagy 80%-nál több, de 90%-nál kevesebb ammónium-nitrát kalcium-karbonáttal és/vagy dolomittal és/vagy ásványi kalcium-szulfáttal keverve, és legfeljebb 0,4% összes éghető anyag tartalommal (beleértve a szerves anyagokat szénegyenértékre számítva); vagy
  - c) nitrogén típusú, ammónium-nitrát alapú műtrágya, amely ammónium-nitrát és ammónium-szulfát keverékéből áll 45%-nál több, de 70%-nál kevesebb ammónium-nitrát tartalommal és legfeljebb 0,4% összes éghető anyag tartalommal (beleértve a szerves anyagokat szénegyenértékre számítva), oly módon, hogy ammónium-nitrát és ammónium-szulfát tartalom együtt meghaladja a 70%-ot.
- 309** Ezt a tételt a főleg ammónium-nitrát és tüzelőanyag keverékéből álló, érzékenyítés nélküli emulziókra, szuszpenziókra és gélekre kell alkalmazni, amelyek csak a felhasználás előtti további feldolgozás után válnak E típusú robbantóanyaggá.
- Az emulzió jellegzetes összetétele: 60...85% ammónium-nitrát; 5...30% víz; 2...8% tüzelőanyag; 0,5...4% emulgáló szer; 0...10% oldható égésgátló, valamint nyomjelző adalék. Az ammónium-nitrát egy részét más szervesetlen nitrátok helyettesíthetik.
- A szuszpenzió és a gél jellegzetes összetétele: 60...85% ammónium-nitrát; 0...5% nátrium- vagy kálium-perklorát; 0...17% hexamin-nitrát vagy monometilamin-nitrát; 5...30% víz; 2...15% tüzelőanyag; 0,5...4% sűrítőanyag; 0...10% oldható égésgátló, valamint nyomjelző adalék. Az ammónium-nitrát egy részét más szervesetlen nitrátok helyettesíthetik.
- Az anyagoknak ki kell állniuk a „Vizsgálatok és kritériumok kézikönyv” I. rész, 18. szakasz 8 vizsgálati sorozatot és a besorolást az illetékes hatóságnak jóvá kell hagynia.

- 310** A „Vizsgálatok és kritériumok kézikönyv” 38.3 fejezetében található vizsgálati követelményeket nem kell alkalmazni a legfeljebb 100 cellából vagy akkumulátorból álló gyártási sorozatokra, ill. a cellák és akkumulátorok gyártási mintáira, ha vizsgálat céljából szállítják és:
- a) a cellák és akkumulátorok fém-, műanyag- vagy rétegelt falemez hordó vagy fém-, műanyag- vagy faláda külső csomagolásban vannak és a csomagoló-eszköz teljesíti az I csomagolási csoport kritériumait; és
  - b) a külső csomagoláson belül minden cella és akkumulátor egyedileg belső csomagolásban van és nem éghető, nem vezetőképes párnázóanyaggal van körülvéve.
- 311** Az anyagok csak akkor szállíthatók ezen tétel alatt, ha azt az illetékes hatóság a „Vizsgálatok és kritériumok kézikönyv” I. rész szerinti, megfelelő vizsgálatok alapján engedélyezte. A csomagolásnak biztosítania kell, hogy a hígítószer százalékos mennyisége a szállítás alatt soha ne csökkenjen az illetékes hatóság engedélyében meghatározott érték alá.
- 312** (fenntartva)
- 313** A 8 osztály kritériumait kielégítő anyagokat és keverékeket el kell látni a járulékos veszélyre utaló 8 számú bárcával is (lásd az 5.2.2.2.2 pontot).
- 314**
- a) Ezek az anyagok magasabb hőmérsékleteken hajlamosak az exoterm bomlásra. A bomlást hő vagy szennyeződések [pl. fémporok (vas, mangán, kobalt, magnézium) és keverékeik] is kiválthatják;
  - b) A szállítás alatt ezeket az anyagokat árnyékolással a közvetlen napsugárzástól és mindenfajta hőforrástól védeni kell és megfelelően szellőzőt helyre kell elhelyezni.
- 315** Ez a tétel nem használható azokra a 6.1 osztályba tartozó anyagokra, amelyek mérgezőképessége belélegzés esetén a 2.2.61.1.8 pontban leírtak szerint az I csomagolási csoportnak felel meg.
- 316** Ezt a tételt csak a száraz kalcium-hipokloritra lehet alkalmazni, ha nem-morzsolódó tabletta formában szállítják.
- 317** A „hasadó-engedményes” megnevezés csak a 6.4.11.2 bekezdésnek megfelelő küldeménydarabokra használható.
- 318** Az okmányokban a helyes szállítási megnevezést ki kell egészíteni a műszaki megnevezéssel (lásd a 3.1.2.8 bekezdést). Ha a szállítandó fertőző anyag ismeretlen, de vélhetően kielégíti az „A” kategóriába való felvétel és az UN 2814 vagy az UN 2900 alá történő besorolás kritériumait, a fuvarokmányba a helyes szállítási megnevezést követően zárójelbe téve a **„feltehetően „A” kategóriájú fertőző anyag”** bejegyzést kell tenni.
- 319** A P650 csomagolási utasítás szerint csomagolt és jelöléssel ellátott anyagok nem tartoznak az ADR többi előírásainak hatálya alá.
- 320** (törölve)
- 321** Ezt a tároló rendszert mindig úgy kell tekinteni, hogy hidrogént tartalmaz.

- 322** Ezt az árut a III csomagolási csoportba lehet sorolni, ha nem-morzsolódó tabletta formában szállítják.
- 323** (fenntartva)
- 324** A 99%-os vagy az alatti koncentrációjú anyagot stabilizálni kell.
- 325** Ha az anyag nem hasadó vagy hasadó-engedményes urán-hexafluorid, akkor az UN 2978 tételhez kell sorolni.
- 326** Ha az anyag hasadó urán-hexafluorid, akkor az UN 2977 tételhez kell sorolni.
- 327** Ez a tétel alkalmazható az 5.4.1.1.3 pont szerint feladott, hulladékká vált aeroszol csomagolások újrahasznosítás vagy ártalmatlanítás céljából történő szállításakor is. Ilyen esetben az aeroszol csomagolást nem kell az akaratlan működtetés elleni védelemmel ellátni, feltéve, hogy megtették a szükséges óvintézkedéseket a veszélyes nyomásnövekedés, ill. veszélyes atmoszféra kialakulásának megakadályozására. Azokat az aeroszolókat, amelyek nem szivárognak, ill. nincsenek nagyon deformálódva, a P003 csomagolási utasításnak és a PP87 különleges csomagolási előírásnak megfelelően kell csomagolni, vagy az LP02 csomagolási utasításnak és az L2 különleges csomagolási előírásnak megfelelően. A szivárgó vagy erősen deformálódott aeroszol csomagolásokat kármentő csomagolásban kell szállítani, megfelelő óvintézkedésekkel biztosítva, hogy nem lép fel veszélyes nyomásnövekedés.
